Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method of making a semiconductor device, classified in class 438, subclass 300.
- II. Claims 10-20, drawn to a semiconductor device, classified in class 257, subclass 347.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process such as forming the trench oxide and forming the first stack within the trench oxide.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

During a telephone conversation with Les Szivos on December 1, 2005 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-9. Affirmation of this election must be made by applicant in replying to this Office action. Claims 10-20 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 2891

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Les Szivos on December 1, 2005.

The application has been amended as follows:

In claim 1, line 15, after "material", insert --stack--;

In claim 1, line 25, after "forming", insert --the raised source/drain region,--.

In claim 5, line 2, after "stack", insert --layer--.

In claim 8, line 2, delete "spacers are", and insert --spacer is--.

In claim 9, line 2, delete "spacers", and insert --spacer--.

Cancel claims 10-20.

The following is an examiner's statement of reasons for allowance:

The prior art does not disclose forming a raised source/drain region on the strained Si layer in regions adjacent to the second stack, and such that the exposed sidewalls of the trench oxide are protected with a sacrificial nitride spacer as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2891

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ajmera – US 6,503,833 and Noguchi – US 6,682,965 describe forming strained devices.
